## The integration between Zimbra and ProcessMaker

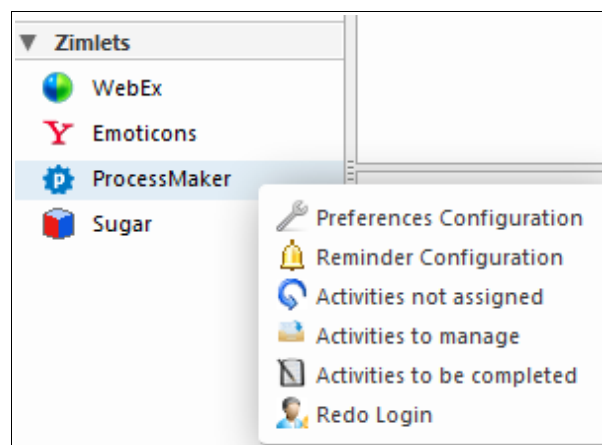

## Zimbra & ProcessMaker: *work is easier!*

Seacom, the Italian distributor of Zimbra and ProcessMaker, analyzes, implements and realizes, through the integration between the two solutions, processes that can be triggered by emails sent or received, which can be managed directly from the Zimbra webmail, simplifying the work of every day.

## The feature of Zimlet SiFlow

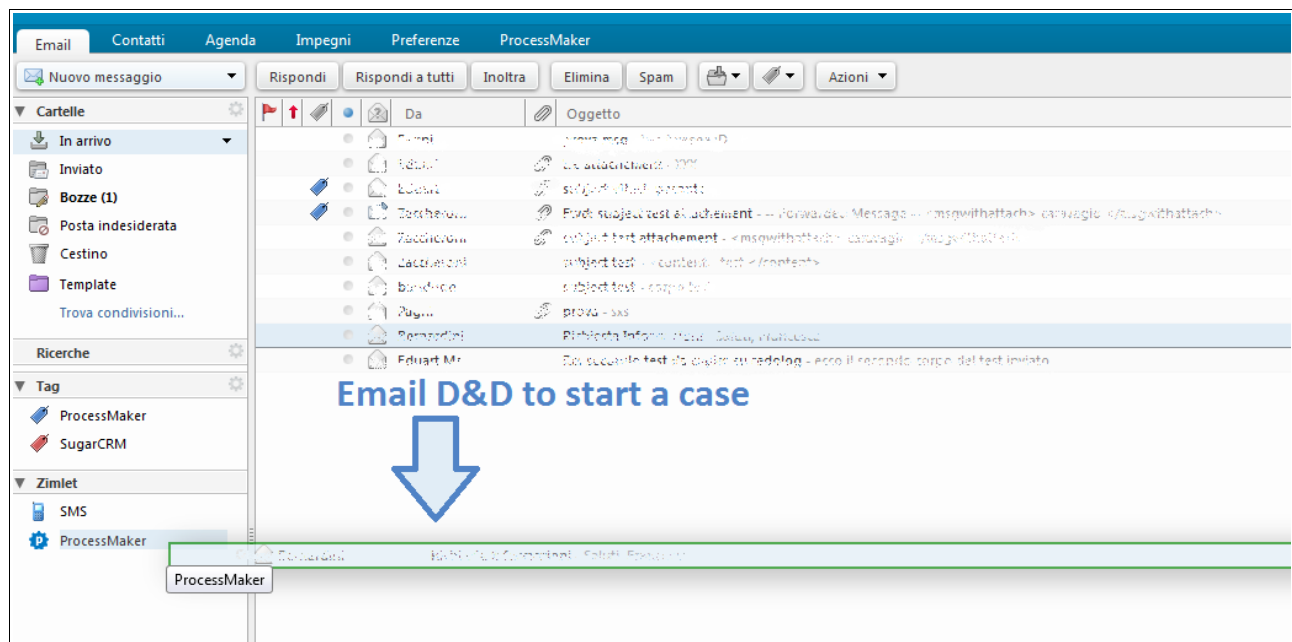

The following describes some of the features provided by the Zimlet SiFlow

1) **The management of preferences.** SiFlow allows you to view the preferences of ProcessMaker directly from the Zimlet present in the interface of Zimbra.

2) **The drag and drop functionality.** It's possible to boot the process, by simply dragging a email on the Zimlet.

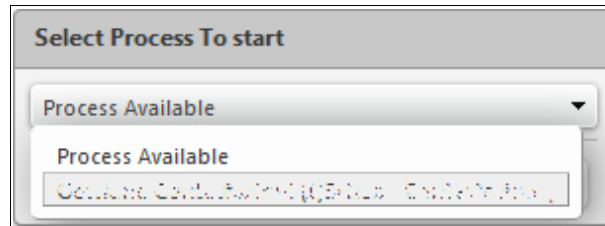

The integration between Zimbra and ProcessMaker, use the information that is in the email in the process.

### 3) The Zimlet is independent from the process.

With the same Zimlet you can activate all the jobs assigned.

### 4) The **ProcessMaker Bar**. Zimlet adds to the email used to trigger a process in which a bar will display the information about the process triggered by that specific email.

Gestione Contenziosi	494	Scheda Contestazione Cliente: Agenzia del	DRAFT	2013-09-16 14:48:57

## 5) A reminder of activities.

The Zimlet allows you to view, instead of the mini calendar, a reminder of the work still to take charge.
